**Select one:**

- I hereby certify that all components of the stormwater management system have been built in accordance with the approved drainage plan and construction specifications.
  
- There are deviations from the approved drainage plan. I certify that the changes will not have any effect on the design by producing any addition to discharge rate, volume, velocity, frequency, duration and level of high water; reduction to base flow and recharge of water resources; and diminished treatment of stormwater. The changes are listed on the plan in red and itemized in the attached narrative.
